Profile

Math Team Lead at Playtech with over four years of experience in game development and software engineering. Specialise in designing mathematical models for online slot games, leading a team of developers, and building internal tooling. Strong foundation in C#, JavaScript, and Unity, with a BSc in Games Software Engineering from Bournemouth University.

Experience

Playtech

Math Team Lead September 2025 – Present / London, England

- Lead and mentor a growing team of developers, delegating tasks and driving technical decisions.
- Actively improving internal tooling to enable more efficient creation of game mathematical models.
- Continue to lead development of various game titles, designing logic and balancing from concept to release.

Game Developer September 2023 – August 2025 / London, England

- Developed game simulators and prototypes in C# and Unity to validate and optimise game balancing.
- Took full ownership of internal web-based tooling in JavaScript, streamlining processes for faster iteration.
- Served as lead on multiple game titles including Gold Trio Leprechaun's Luck, Gold Trio Lil Demon and Lil Sphinx, designing logic and balancing from concept to release.

Junior Developer October 2021 – August 2023 / London, England

- Developed game simulators and prototypes in C# and Unity to validate and optimise game balancing.
- Took ownership of migrating game prototyping from local desktop tools to web-based applications, significantly improving team workflow and accessibility.

The Bell Inn

Kitchen Porter October 2016 – January 2020 / Essex, England

- Worked part-time in a fast-paced kitchen, building reliability and strong work ethic over 3 years.

Education

BSc (Hons) Games Software Engineering

2018 – 2021 / Bournemouth University

Second Class (Upper) Honours. Dissertation: Implementing a Procedural Algorithm for Generation of a Rogue-like Dungeon.

A Levels

2016 – 2018 / Palmers Sixth Form College

Mathematics, Computer Science, Physics

Projects

Procedural Dungeon Generator – C#, Unity

Dissertation project implementing Prim's MST and A* Search algorithms for rogue-like dungeon generation with randomised, configurable layouts.

Chaotic Engine – C#/C++, OpenGL, SDL

Custom modular game engine built from scratch featuring OpenGL rendering, SDL management, and a component-based entity system supporting 2D and 3D graphics.

Portfolio Website – JavaScript, React, Vite

Responsive portfolio site with JSON-driven content, GitHub Pages deployment, and custom domain with Cloudflare SSL.

Skills

Languages: C#, JavaScript, C++, HTML, SQL, VBA

Frameworks: React, Node.js

Tools: Unity, Git, OpenGL, SDL, CMake, Vite, Postman, Microsoft Excel, GIMP

IDEs: Visual Studio, Cursor

Other: PostgreSQL, Linux Ubuntu, Mathematics, Leadership, Mentoring

Interests

Strategy gaming enthusiast and regular parkrun participant, both as a runner and volunteer.
